

Start Recovering Lost Profits Today

TLM Group Ltd are pleased to announce they have been awarded the UK distributorship of the VR Refiner from Coolfuel UK Ltd.

The VR Refiner is a new and unique system that will constantly recover re-saleable fuel during a delivery, normal operations and site down time. The VR Refiner is a forecourt mounted system that converts all vapour from the storage tanks plus vapour created by a delivery or Stage Two back in to liquid petrol. The VR Refiner delivers profit straight to the bottom line, from the day of the first delivery it is cash flow positive. A petrol forecourt selling 4,000,000 litres of petrol spirit per annum can expect to see a return of at least 4,500 litres of re-saleable fuel per annum.

Contact us for a no obligation product demonstration and explanation on how this unique system will boost your profits.

The VR Refiner

- Recovers duty free re-saleable fuel from all petrol vapours
- Eliminates site atmospheric pollution
- Eliminates tank farm pressurisation
- Compatible with Stage One and Two sites
- Increases profitability
